*OMB Number:* 0572-0025.

*Expiration Date of Approval:* December 31, 1995.

*Type of Request:* Extension and revision of a currently approved information collection.

*Abstract:* The Rural Utilities Services (RUS) manages loan programs in accordance with the Rural Electrification Act of 1936, 7 U.S.C. 901 *et seq.*, as amended. An important part of safeguarding loan security is to see that RUS financed facilities are being responsibly used, adequately operated, and adequately maintained. Future needs have to be anticipated to ensure that facilities will continue to produce revenue and that loans will be repaid as required by the RUS mortgage. A periodic operations and maintenance (O&M) review, using the RUS Form 300, in accordance with RUS Bulletin 161-5, is an effective means for RUS to determine whether the borrowers' systems are being properly operated and

maintained, thereby protecting the loan collateral. An O&M review is also used to rate facilities and can be used for appraisals of collateral as prescribed by Office of Management and Budget (OMB) Circular A-129, Policies for Federal Credit Programs and Non-Tax Receivables.

*Estimate of Burden:* Public Reporting burden for this collection of information is estimated to average 4 hours per response.

*Respondents:* Businesses or other for-profit, small businesses or organizations.

*Estimated Number of Respondents:* 280

*Estimated Number of Responses per Respondent:* 1

*Estimated Total Annual Burden on Respondents:* 1,120

## National Institute of Standards and Technology

### Government Owned Inventions

**AGENCY:** National Institute of Standards and Technology, Commerce.

**ACTION:** Notice of Government owned inventions available for licensing.

**SUMMARY:** The inventions listed below are owned by the U.S. Government, as represented by the Department of Commerce, and are available for licensing in accordance with 35 U.S.C. 207 and 37 CFR Part 404 to achieve expeditious commercialization of results of federally funded research and development.

**FOR FURTHER INFORMATION CONTACT:**

Technical and licensing information on these inventions may be obtained by writing to: Marcia Salkeld, National Institute of Standards and Technology, Office of Technology Partnerships, Physics Building, Room B-256, Gaithersburg, MD 20899; Fax 301-869-2751. Any request for information should include the NIST Docket No. and Title for the relevant invention as indicated below.

**SUPPLEMENTARY INFORMATION:** The inventions available for licensing are:

*NIST Docket No. 94-031*

*Title: Friction and Wear Resistant Coatings For Titanium and Its Alloys.*

*Description:* This NIST invention is a method to control friction and wear of titanium and its alloys through the use of novel coatings. The coatings contain epoxide polymers with anti-wear fillers.

*NIST Docket No. 95-034CIP*

*Title:* Overlay Target and Measurement Procedure to Enable Self-Correction for Wafer-Induced and Tool-Induced Shift by All-Imaging-Sensor Means.

*Description:* The estimates of overlay extracted by a metrology instrument from standard targets on IC wafers are ordinarily burdened by difficult-to-estimate systematic errors called shifts. The first of two parts of this invention is to replacement of a standard overlay target used in normal IC fabrication practice with multiple instances of a so-called target unit. The referenced target units constitute a single so-called self-calibrating optical-overlay target structure. Each target unit is a standard target having an additional grouping of features called a null-detector subsystem. The null-detector subsystems embodied in the new self-calibrating optical-overlay target structure enable the extraction of zero-overlay indices. The second part of the invention includes modification to the metrology instrument's target scanning and imaging systems to provide supplementary inspection of the null-detector subsystems. The zero-overlay indices, when analyzed in conjunction with the burdened overlay estimates extracted from the corresponding multiple instances of the standard targets within the same self-calibrating optical-overlay target structure, enable an estimate of the shift affecting the overlay measurements. The unique novelty of providing self-calibration of the metrology instrument, with respect to shift, on the same substrate as that from which overlay estimates are sought by the user has significant commercial importance.
